RADIOLOGIC REPORT

Case ID: 20250916u0001
Patient: Lemoncito, Jeremy Sanglay
Source: Referral
Physician: Dr. Rox Salazar
Request Date: 9/16/2025
Exam Type: TRANSVAGINAL
Service: ultrasound

FINDINGS:

The uterus is anteverted, normal in size and shape, with homogeneous myometrial echotexture.

The endometrium is visualized and measures 8 mm in thickness, within normal limits for the patient's age and menstrual cycle phase.

Both ovaries are identified:

Right ovary measures 3.1 x 2.4 cm, with multiple small peripheral follicles.

Left ovary measures 3.3 x 2.6 cm, also with multiple small peripheral follicles.

No adnexal masses are seen.

No free fluid noted in the cul-de-sac.

IMPRESSION:

Normal transvaginal ultrasound of the uterus and ovaries.

Findings suggestive of polycystic ovarian morphology (if clinically correlated).

No evidence of adnexal mass or pelvic free fluid.

Mary Ann, Cruz (Radiologic Technologist)

Dr. Kathleen Kaye P. Justo-Singson (Radiologist)
